*MasterChart – adding multiple sentimentors (studies) to create a meta-sentimentor with working order book*

Configurable interpretation for sentimentor signals – you decide how bullish or bearish a signal should be

Screen views

Examples of functionality

IQ-Trader gives you step-by-step control: you research, configure and then build your trades according to carefully applied strategies and with detailed market intelligence

MasterChart – showing WorkspaceBar (left); select commodity and templates, scripts and saved studies

Express editor – Easy Language system scripting

Order confirmation window (trade ticket) – optional

About Patsystems

The power to trade

Patsystems was founded in 1994 to provide electronic solutions for traders. Since then, it has grown into a global business on the strength of innovative technology and the rapid spread of screen-based trading.

Having built its reputation on J-Trader, a widely distributed front-end, Patsystems is developing new technologies and trading methods, and is increasingly recognised as the first choice for professional traders.

Banks, trading houses and other professional users depend on Patsystems for the latest software. Through next generation applications such as IQ-Trader and Pro-Mark, traders have the speed, power and control to succeed in fast-changing electronic markets.

Today, Patsystems sets the standard for electronic trading.

Key business areas

Trading systems
- Industry-leading technology for professional traders: front-end and back-end systems that ensure global connectivity from a single screen
- Pre-trade risk management, superior customer support, order routing to electronic and open outcry exchanges

Exchange systems
- A Patsystems Matching Engine offering matching and settlement for derivatives and commodity exchanges
- End-to-end technology for exchanges worldwide

Trading solutions

- **Pro-Mark** – a next generation front-end for high-volume professionals
- **IQ-Trader** – a sophisticated front-end for strategic traders
- **J-Trader** – Patsystems original front-end, a marketing-leading application for online, multi-exchange, real-time access to futures, options and forex markets
- **Screen2pit** – technology that routes orders to open outcry exchanges, bridging electronic and non-electronic markets
- **J-Simulator** – a versatile training tool to develop trading skills

IQ-Trader
The front-end for strategists

patsystems
professional automated trading systems

Intelligent trading…made simple

Charting and analytics

Automated strategies

Backtesting and optimisation

Automated spreading

Imagine a front-end with exceptional vision. One that interprets markets, analyses opportunities, defines strategies, and helps you plot the best course for your trades. A front-end with an intellect.

You're thinking of IQ-Trader.

Designed for technical and system traders, hedge fund managers, commodity trading advisors and other advanced users, IQ-Trader is an excellent tool for professionals who want a comprehensive view of markets and products.

No other front-end offers the same creative depth and control; no other screen gives you more market intelligence, analysis and strategic direction.

With IQ-Trader, you have the power of second sight. You look beyond the surface, you identify patterns and trends, you're given the whole picture. In short, you see what others can't.

Most of all, to ensure you profit from these insights, you have the widest range of tools to transform trading ideas into realities.

Automation without programming

IQ-Trader enables you to perform sophisticated operations without the need for programming skills. Intelligence is in-built, intuitive, automatic.

You can create studies, trade guards, complex strategies – in fact, a huge range of defensive and offensive 'trading plays' – all by pointing and clicking. Moreover, IQ-Trader offers backtesting and optimisation that are unequalled in speed, functionality and ease of use. Seamless automation is guaranteed.

Flexible and creative

You have true flexibility and creativity. IQ-Trader provides a versatile framework with powerful analytical tools to explore trading opportunities and scenarios. Take charting, for example. You can create individual studies and layouts using indicators, filters and drawing tools, and you can drag and drop information onto charts.

You research, configure and then build your trades step by step. The result is precise control over your trading environment; you select the information you need, optimise the parameters that suit your chosen strategy, and focus on clear and achievable trading goals.

As for trading styles, you have (among others) discretionary trading, scalping, fully automated trading, real-time monitoring, and database screening.

Market knowledge

Knowledge is power. The power to make informed decisions, the power to execute the right trading strategies at the right time. IQ-Trader gives you the latest market news, charting and analytics by connecting to a large number of leading data providers.

Key benefits

Charting/analytics

- Combines Patsystems real-time data with historical data from third-party data providers
- Direct order entry from charts
- Creates trading signals based on analytic studies with auto order entry
- Choice of popular technical studies and charting tools such as Candlesticks, Bollinger bands, and Fibonacci retracements
- Optimises strategies to create winning plans

Trading style

- Drag-and-drop trading window for pricing, order entry and cancellation
- Position and P&L display in quotes window
- Tabbed working order/completed order display
- Ladder-style depth of market order entry (like the Reflector functionality in Pro-Mark and J-Trader), including volume at price display and market weight indicators
- Order entry directly from charts
- Bracket orders to automate exit and stop loss
- Simple ticket order entry
- News window for use with third-party news feeds

Advanced trading tools

- Create trading systems and strategies graphically or through simple Express programming language
- Functionality to optimise trading strategies
- Backtesting and forward simulation of strategies
- Money management tools to control trading systems
- Event-driven trading strategies

Spread technology

- Cross-product and cross-market spreading
- Any number of legs
- Active quoting of one or more legs in the market
- Allows spread of spreads
- Charting of spreads with historical and intra-day views
- Create trading signals on spreads for automated trading
- Position management and brackets on spreads

IQ levels

IQ-Trader is available in three versions with the following functionality:

Premier
- *Inter-product spreading*
- *Strategy scripting tool (Express)*
